EXPERIENCE

I am a software/infrastructure engineer. I currently primarily use Go and NixOS to build and deploy software.
In the past I have worked with various languages: Python, Node.js, Racket, Common LISP, Emacs LISP, Lua (have some experience with Haskell, Zig & Rust).

I have a private homelab with mesh network on top of Yggdrasil with mail server, git and a bunch of other services (like Gitea & K3S) to self host full development cycle.

Here is a list of the companies I have worked with:

NDA, LEAD SOFTWARE ENGINEER

May 2024 – present (remote)

Leading development of a software-defined networking platform.

- implemented core infrastructure services for declarative management of network topologies across Linux hosts on various cloud platforms
- maintaining custom Linux kernel patches for Wireguard
- implemented binding code generator for scripting network topologies (using Starlark to call Go code)

CTRL2GO, LEAD SOFTWARE ENGINEER

Moscow, Russian Federation, Mar 2023 – Apr 2024 (remote)

As part of the backend team, I worked on Go services for predictive analytics of industrial equipment (gas turbines, compressors, etc.).

- implemented a data storage subsystem for time-series telemetry from factory equipment
- implemented a replay mechanism allowing historical data to be re-processed through the analytics pipeline
- services communicated over gRPC, persisting data to PostgreSQL and ClickHouse

SBERDEVICES, LEAD SOFTWARE/INFRASTRUCTURE ENGINEER

Moscow, Russian Federation, Oct 2020 – Mar 2022 (remote/on site)

As part of the infrastructure team, I implemented:

- infrastructure reverse proxy for DNS protocol
- code review automation around Gitlab merge requests
- performance and business metrics collection system on top of ClickHouse
- authentication & authorization proxy (mostly OAuth2 & OIDC)
- SberCloud infrastructure with NixOS & Terraform from scratch
- SSO with Keycloak (with custom in-house extensions)
- Teleport SSH bastion with journaling & audit
- secrets sharing system on top of PGP
- Let's Encrypt (ACME) certificate management automation
- Kubernetes multi-master clusters on K3S
- custom Docker registry to serve containers built with Nix

QIWI BLOCKCHAIN TECHNOLOGIES, SENIOR SOFTWARE ENGINEER

Moscow, Russian Federation, Mar 2019 – Jul 2020 (remote/on site)

Our team developed a DeFi-like distributed system for Digital Financial Assets trading.
I was a technical product owner for the backend, actively participating in development and planning.
The project was based on the Ethereum fork with Russian cryptography and a modified PoA consensus algorithm.

CRYPTOUNICORNS, SOFTWARE ENGINEER

Moscow, Russian Federation, Jun 2017 – Jan 2019 (remote)

Developed cryptocurrency market data collection and analysis services as part of a crypto enthusiasts team.

ROCKET10, SOFTWARE ENGINEER

Moscow, Russian Federation, Nov 2016 – Jun 2017 (on site)

Our team designed a user action counting system for advertisement campaigns in mobile apps.

YANDEX, SOFTWARE ENGINEER

Moscow, Russian Federation, Nov 2012 – Sep 2016 (on site)

Worked in 3 different teams:

- frontend components team (used all over the service) called Lego
- frontend team at Yandex.Market
- infrastructure team at Yandex.Market

Highlights:

- participated in a complete frontend redesign
- participated in the Yandex.Market renovation on Node.js
- workflow & Git consulting for the teams
- made A/B testing infrastructure for Yandex.Market
- created Debian packaging tools for the team

CHANNEL ONE RUSSIA WORLDWIDE, SYSTEMS ADMINISTRATOR

Moscow, Russian Federation, Oct 2011 – Sep 2012 (on site)

Provided technical support as a reliability engineer responsible for broadcasting clusters.

Created my first open-source project which was useful to others.

EDUCATION

Graduated from the Moscow Witte University as a software engineer. Incomplete bachelor degree.

HACKATHONS

I've participated in:

- 2015 vk.com hackathon (our team won!)
- 2016 IoT hackathon
- 2016 2gis hackathon
- 2017 night python
